

# Next Level Dentures In 3 Appointments

## Mastering the Digital Denture Process

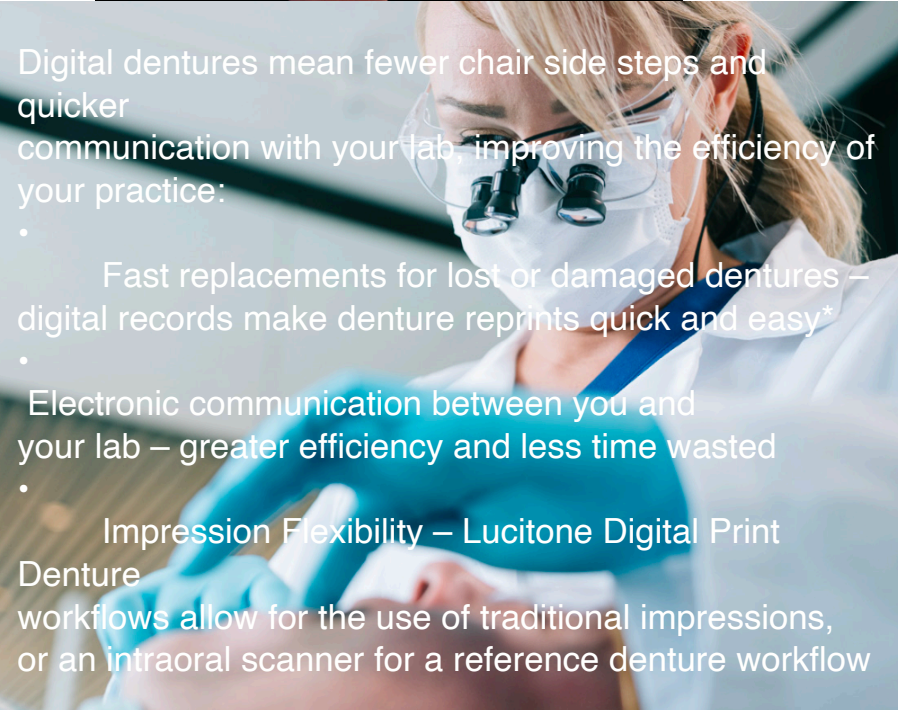

- **Improving the efficiency of your practice**
- **Unmatched accuracy for excellent outcomes**
- **ENTER ANOTHER DIMENSION IN DENTURE ACCURACY**
- **UPGRADE COMFORT AND FIT WITH GREATER ACCURACY**

Explore the cutting-edge world of digital denture creation in this comprehensive course. Gain insights into the latest technologies and techniques used in digital denture fabrication, including IO scanning, Designing, and 3D printing. Learn about the benefits of digital workflows for precision, efficiency, and patient satisfaction.

David Jackson, CDT.

David is the owner of Mid-South Dental Lab. He is a third-generation dental technician that grew up in a removable lab. After graduating from Tennessee Technology Center at Nashville with a diploma in Dental Ceramics and becoming a CDT, he opened his lab in 2012.

David takes pride in being innovative in the dental lab industry and embracing the digital advances. He loves creating new smiles and transforming lives with the art of dentistry.

Digital dentures mean fewer chair side steps and quicker communication with your lab, improving the efficiency of your practice:

- Fast replacements for lost or damaged dentures – digital records make denture reprints quick and easy\*
- Electronic communication between you and your lab – greater efficiency and less time wasted
- Impression Flexibility – Lucitone Digital Print Denture workflows allow for the use of traditional impressions, or an intraoral scanner for a reference denture workflow
